**Project:** To install GPS ionization systems in the Air Handlers and RTUs in the Nobles County Buildings

**Project Scope:**

NAC is pleased to offer the following pricing for the above referenced project. NAC's pricing is based on the information provided and a site visit walkthrough.

**Air Handling & Rooftop Units GPS Ionizations Systems**

- Provision and installation of a GPS modular ionization system with power supply in the existing supply duct of the office/nurse area air-handling unit.
- The GPS system reduces particles, neutralizes odors, reduces pathogens and saves energy.
- GPS NPBI technology works to safely clean the air inside industrial, commercial and residential buildings. The patented technology uses an electronic charge to create a plasma field filled with a high concentration of + and - ions. As these ions travel with the air stream, they attach to particles, pathogens and gas molecules. The ions help to agglomerate fine sub-micron particles, making them filterable. The ions kill pathogens by robbing them of life-sustaining hydrogen. The ions breakdown harmful VOCs with an Electron Volt Potential under twelve (eV<12) into harmless compounds like O<sub>2</sub>, CO<sub>2</sub>, N<sub>2</sub>, and H<sub>2</sub>O. The ions produced travel within the air stream into the occupied spaces, cleaning the air everywhere the ions travel, even in spaces unseen.
- Owner demonstration on the new ionization system.

**Pricing to provide the above scope of work:**
